

6 Simple Calculator

Only considering CHD and Cardiomyopathy patients. This is a basic estimate based on Diagnosis, Age Under 2, and MCS type. Need to make final adjustments for censoring and to prevent overfitting, so consider this a rough estimate.

Cardiomyopathy patients have a predicted survival between 75% (Under 2 years old, on ECMO) and 100% (not on ECMO or VAD).

CHD patients had a predicted survival between 62% (under 2 years old, on ECMO) and 91% (not on ECMO or VAD).

The “-” symbol indicates the value was missing.

6.1 Combines CHD and CM

PRIM_DX	TXECMO	TXVAD	AGE_UNDER_2	n_obs	n_survive	p_survive	n_total	n_cens

Cardiomyopathy	0	0	1	201	198	0.99	211	10
Cardiomyopathy	-	-	1	5	5	1.00	6	1
Cardiomyopathy	-	-	0	8	8	1.00	9	1

6.3 CHD Only

Adding in Laterality Disorder sub-category. With the help of ChatGPT (needs review!) I used these CHD conditions to define a new Laterality Disorder (**CHD_LAT**) sub-diagnosis:

- Dextrocardia (CHD_DEX)
- Situs Inversus (CHD_SI)

- Heterotaxy (CHD_HETER)
- Interrupted IVC (CHD_IIVC)
- Bilateral SVC (CHD_BIVC)
- Left SVC with no right SVC (CHD_L SVC)
- Right Aortic Arch (CHD_RAA)
- AV Discordance when part of atrial or ventricular situs abnormality (CHD_AVD)

The first three (Dextrocardia, Heterotaxy, and Situs Inversus) were significant in the univariate analysis.

PRIM_DX	CHD_LAT	TXECMO	TXVAD	AGE_UNDER_2	n_obs	n_survive	p_survive	n_total	n_cens
Congenital HD	1	1	0	1	1	0	0.00	1	0
Congenital HD	0	1	0	1	33	21	0.64	33	0
Congenital HD	1	0	1	1	6	4	0.67	7	1
Congenital HD	1	0	0	1	23	17	0.74	24	1
Congenital HD	0	1	0	0	16	12	0.75	19	3
